### **DETAILED ACTION**

In the paper mailed October 27, 2003, applicant cancelled claims 6, 7, 10-19 and 21-36.

#### ***Election/Restrictions***

Applicant's election without traverse of group I in the paper mailed October 27, 2003 is acknowledged. Claims 1-5, 8, 9 and 20 are under consideration.

#### ***Specification***

The disclosure is objected to because of the following informalities: The final page of the disclosure is page 38, while the claims begin on page 48. Are there ten pages missing from the disclosure, or should the claim pages be numbered 39 and 40?

Appropriate correction is required.

#### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-5, 8, 9 and 20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-3, 8-11 of U.S. Patent No. 6,372,206. Although the conflicting claims are not identical, they are not patentably distinct from each other because although the instant claims are drawn to administering bovine IFN $\tau$  and the '206 is

Art Unit: 1648

drawn to administering ovine IFN $\tau$ , Soos et al. teach that IFN $\tau$  from cows and sheep shares a high degree of sequence homology, i.e. 80.4%, as well as similar activities and functions, see column 6, lines 54-65. Therefore, bovine IFN $\tau$  and ovine IFN $\tau$  are obvious alternatives to one another, absent unexpected results to the contrary.
